

Patient Registration, V 7.0

EXECUTIVE SUMMARY

The Patient Registration package (AG) is the package central to all of the billing office software and all patient care applications in the RPMS refer to the Patient Registration system for patient demographics such as patient name, date of birth, address, medical record number, Indian quantum, tribal membership, and insurance. The AG system also automatically updates demographic data periodically at the IHS NPIRS in Albuquerque, New Mexico.

AG version 7.0 contains a number of new items and functions, including additional patient information fields, a revised edit patient information layout, four additional reports, new eligibility reporting and uploading functions, and SSN mismatch reporting functionality.

Version 7.0 also enhances the AG package's communication with other RPMS applications by accommodating insurer sequencing, a functionality that will eventually be used by the Pharmacy Point of Sale and Third Party Billing packages.
